MULTIPLE WAY QUANTUM WALK (MWQW)

08/2019 - PRESENT

- Discussed the error tolerance when implementing MWQW in matterwave systems by using analytical and numerical methods.
- Investigated the defects in previous asymptotic analysis methods when implementing Schrödinger's approach to MWQW.
- Connected MWQW to quantum cellular automata through analysing the hypergeometric functions obtained from path integral methods.
- Proposed that MWQW is a quasi-quantum walk which its exit probability p_∞ behaves between classical and quantum random walks.

SENSITIVE MEASUREMENTS THROUGH MATTER WAVES.

- Research on implementing double-diffraction Bloch oscillation to cancel the phase perterbation when performing sensitive measurements.

MACHINE LEARNING IN MATERIAL DESIGN. [APCOM2019] [CTAM2020]

02/2019 - 06/2020

- Applied generative adversarial networks (GAN) to generate high fidelity microstructure images.
- Proposed regression VGG networks (rVGG) that can predict mechanical properties from material images with 95% accuracy.
- Outperformed Finite Element Methods (FEM) in predicting time over 100 times.
- Investigated a Bayesian-optimization model that can fine-tune GAN-generated microstructure geometry through the rapid-labeling rVGG.

CONSTRUCTING HOMOGENOUS MATERIALS UNSING COMPUTATIONAL METHODS.

- Implemented pruning protocol on 96 core CPUs to generate auxetic networks inspired by "Auxetic metamaterials from disordered networks".
- Implemented a stochastic protocol to produce large scale homogenous microstructure datasets by two-point correlation function.
